Art Unit: 2193

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-31 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Rejection grounds continue to be those set forth in the previous office action (Paper dated 10/20/06, paragraph 3).

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-31 provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over (1) claims 14-21 of copending Application No. 10/689,256, and (2) claims 14-20 of copending Application No. 10/689,449. Although the conflicting claims are not identical, they are not

Art Unit: 2193

patentably distinct from each other because the scopes of the inventions are finding a local extrema by separating the set of into odd set and even set.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

3. Applicants' arguments filed on 2/23/07 have been fully considered but they are not persuasive.

Applicants, in his remarks, argues that:

(1) "[I]t is respectfully submitted that each of the independent claims in the instant application produces a useful, concrete, and tangible result. For example, claim 1 recites a method of separating a set of values into an odd set corresponding to values in odd positions within the original data set and an even set corresponding to values in even positions within the original data set. A first extrema is determined from the odd set, and a second extrema is determined from the even set. Next, a local extrema is determined from the first extrema and the second extrema. The local extrema is then saved. The recited method is useful in that it determines a local extrema for a processing element. The method recited in claim 1 is concrete in that it is repeatable. A specific value, a local extrema, is determined and stored for future use. The stored local extrema is tangible in the sense that it has meaning in the real world, and is therefore not abstract.", and

(2) "[I]n paragraph 4 of the Office action, claims 1-31 are provisionally rejected under the judicially created doctrine of the obviousness-type double patenting as being unpatentable over (1) claims 14-21 of copending Application No. 10/689,256 and (2) claims 14-20 of copending Application No. 10/689,449. It is respectfully submitted that the provisional obviousness-type double patenting rejection is improper inasmuch as the two copending applications have the same filing date as the instant application, i.e., neither of the copending applications has an earlier effective filing date. As a result, there can be no unjustified or improper time-wise extension of the "right to exclude" granted by the instant application should it issue as a patent. For that reason, it is respectfully requested that the obviousness-type double patenting rejection be withdrawn." (emphasis added).

With respect to the arguments, the examiner carefully reviews the claimed invention. First, it is noted that applicant hasn't pointed out how/why the claim produces a **useful, concrete, and tangible result**. If the claim as a whole is reasonably interpreted as just solving a mathematical algorithm rather than reciting a practical application of the algorithm which produces a **useful, concrete and tangible result**, then it would be non-statutory. It would appear to be **concrete** and **tangible** in the context of the claim; however, the **useful** [of the stored local extrema] result appears lacking. Therefore, the rejection is still proper. Second, it is noted that the rejection is based on the context of the claimed invention not the filing date.

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
